HH Goa 2026 Shortlisting Task 3: Face Identification & Blockchain Verification

What to build

A pipeline that takes a face scan as input, identifies matching content on the web/social media, and then verifies that discovered data using a blockchain — end to end. Pipeline shape: Face scan input → Web/social media search (find matching post) → Blockchain upload/verification of the discovered data

Technical requirements

1. ***Face identification*** *Detect and encode a face from an input image (any face detection/recognition library or API is acceptable).*

2. ***Social media / web search*** *Use the face to search the web and find at least one real, matching social media post (via reverse image search, an API, or a scripted search approach). This should be a genuine search step, not a hardcoded/pre-picked result.*

3. ***Blockchain verification*** *Once a matching post is found, upload the post (or a hash/fingerprint of it, e.g. the image, text, or metadata) to a blockchain to create a verifiable, tamper-evident record.* ***Any blockchain may be used*** *— public testnet, mainnet, or a local/simulated chain — as long as you can demonstrate re-verifying the data against the on-chain record.*

4. ***No website required*** *You do not need to build or host a project website. Focus your time on the pipeline itself.*

5. ***GitHub repo required*** *Your full source code must be in a GitHub repo, with a README covering what the project does, how to run it, which blockchain you used, and any known limitations.*

Submission requirements

- *GitHub repo link*
- *A screen recording of the working project (no live working link required)*
- *Submission form link : https://forms.gle/oZbQGuwiNeHVcHWo8*

No resubmissions will be allowed — submit only when your build is final.

Screen recording

- *Record your screen showing the pipeline working end to end: face scan → social post found → blockchain upload/verification.*

- *No editing or production needed — a plain screen recording is enough.*
- *Upload it anywhere (YouTube unlisted, Google Drive, Loom, etc.) and share a working link.*

Timeline

- **Task launch:** August 31, 2026
- **Deadline:** Sept 7, 2026, 11:59 PM
